# SALMON—SYNONYMOUS WITH BRITISH COLUMBIA

Sea Agra works with responsible fish farmers to bring you Atlantic salmon, responsibly raised along the evergreen shores of coastal British Columbia.

## SEA AGRA ATLANTICS STORY

Our salmon is raised in one of the world's most diverse and natural ecosystems under the most stringent regulatory environments. Caring for the environment isn't something we take lightly. We work with farmers who responsibly select seawater sites to ensure British Columbia's wildlife and sealife continue to flourish. Our fish are raised sustainably in pens, at low capacity, so they can school and swim at various speeds like they would in the wild.

## QUALITY MANAGEMENT

Genetic integrity is the foundation of high quality, natural salmon. Our farm partners strategically select quick growing fish as brood stock, which are best suited to farming. They employ highly trained and skilled staff that carefully monitor all aspects of fish health and well-being, from feeding and measuring to testing and reporting, so we can deliver premium and consistent flavour, texture and quality to you.

## SUSTAINABILITY

Our salmon farmers are committed to the health and welfare of the fish they raise and the environment around them. There is transparency at every stage of the value chain, delivering confidence and peace of mind all the way from farm to plate.
